SPEAKER BOX W/ BUILT-IN BLUETOOTH MINIAMP, 5" SPEAKERS, AND POWER CENTER

INSTALLATION INSTRUCTIONS

INCLUDED:

- Speaker Box
- Mini Amp with Built-in Blue tooth
- Power Center
- 5" Speakers w/ Wire
- Fastening tape 3 - 75mm pieces

TOOLS NEEDED:

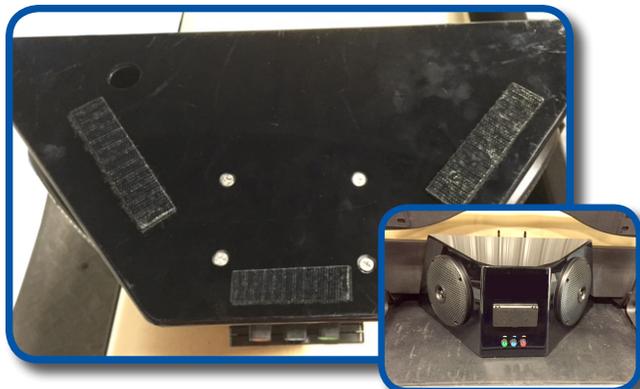

- 1/2" Drill Bit (optional)
- Cordless Drill (optional)
- Tape Measure

CAUTION: This mini amp is designed to work on 12 Volts only. A MJ1612VR or MJ1230C is highly recommended to avoid failure of mini amp.

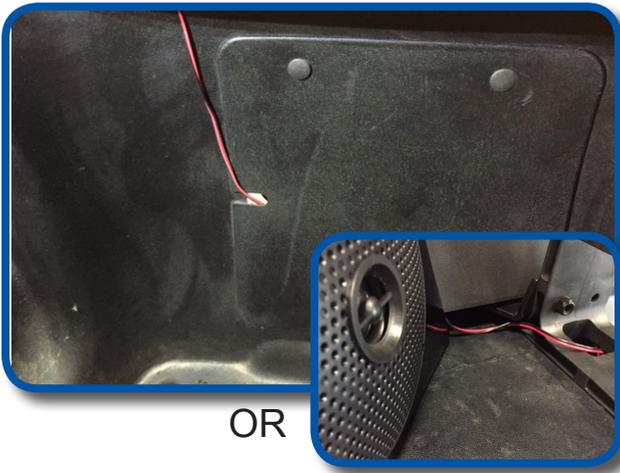

We recommend professional installation. If you choose to not have this product installed by a professional, we highly recommend that you exercise caution, care, and patience when installing this product as it involves drilling holes into your cart's body.

NOTE: This box is specifically designed to fit between the golf car front seat and your rear seat kit.

To begin remove your front seat leanback and bottom cushion.

Attach supplied fastening tape to the speaker box as shown. Now peel film off bottom side fastening tape. This will secure box to car. Use a tape measure to find center point of car and attach box.

Feed the power wires through to the battery compartment to your preference. A 1/2" Drill bit will be needed if you decide to go through the motor cover as shown.

The speaker box kit is designed to operate using 12 Volts. A 1230 Converter is recommended to turn On/Off your speaker box by using the Golf Car's Keyswitch. Failure to do so will cause battery drainage if mini amp is left on while cart is not in use. If using a MJ1612VR, an In-line switch will be needed to operate mini amp. Attaching the kit to 16 Volts or more will cause the mini amp to fail.
